

Product sheet for 3bag tree protection:

3bagTM

Tree protection

Effective tree protection

3bag is a knitted stainless steel bag that provides effective protection against rodents and tools both above and below ground. 3bag has been specially developed and tested as protection against water voles.

Cost and time saving

3bag takes less than two minutes to install and saves farmers, gardeners and hobbyists considerable time and money in pest control. It is flexible and malleable and can be stretched up the tree to protect the trunk.

Environmentally and animal friendly

Helps to minimise the use of chemicals and reduces the need for grass cutting during pollination. Reduces the need for traps and other means of controlling rodents such as voles.

Developed in collaboration with experts

Developed and tested in the field in collaboration with the Norwegian Agricultural Advisory Service, the Norwegian Institute of Bioeconomy Research and the Norwegian University of Science and Technology.

Technical data

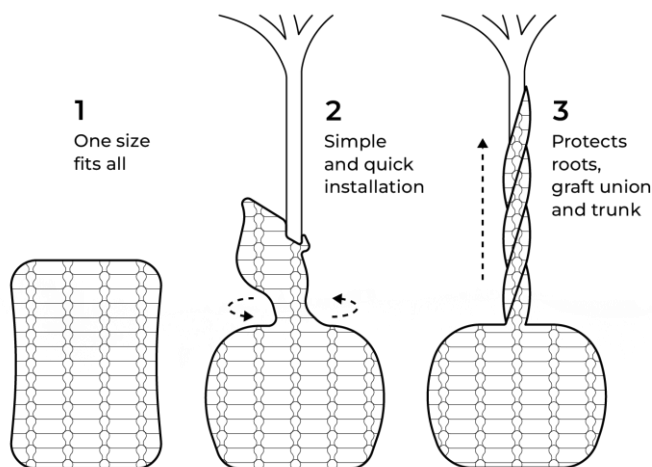

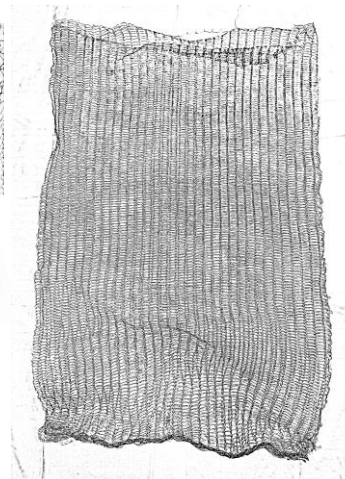

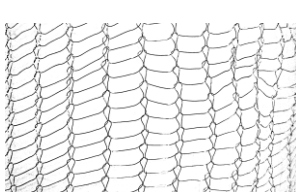

Materials: Stainless steel (SS 304) 0.26 mm diameter, binding 0.7 mm (SS304)

Length: 90–95 cm, width 52 cm (flat) and 33 cm diameter

Mesh size: 1–1.1 cm

Weight: Approx. 163 grams

GS1 Company prefix 709006677
